PERFORMANCE

Cumulative performance over periods to 31 July 2020

	One month	Three months	Six months	One year	Three years	Five years
Share price	(2.3%)	4.7%	(7.0%)	(1.6%)	24.2%	66.2%
NAV	0.2%	10.1%	(2.1%)	(1.5%)	19.1%	59.1%
Peer group [^]	(1.6%)	4.7%	(5.7%)	(7.0%)	7.8%	42.7%

[^]On 1 June 2016 Securities Trust of Scotland changed from benchmarking performance against the MSCI World High Dividend Yield index to an unconstrained strategy measured against the performance of the median of the peer group described below. **Performance is shown in the table above against this new peer group across various time periods for illustrative purposes only.** Prior to adopting a global mandate on 1 August 2011 the company's benchmark was the FTSE All-Share index.

The peer group consists of the AIC Global Equity Income sector combined with actively managed ICVC, SICAV or OEIC funds from Lipper Global - Global Equity Income sector. Performance is measured against the median of this peer group.

12-month performance

	To end Q2 2020	To end Q2 2019	To end Q2 2018	To end Q2 2017	To end Q2 2016
Share price	2.8%	19.5%	2.6%	19.4%	16.9%
NAV	2.4%	11.3%	4.5%	16.6%	17.9%

Past performance is not a guide to future returns.

Source: Martin Currie. The NAV basis used is cum-income in £. Please note prior to July 2017 the NAV basis used was ex-income NAV in £. Ex-income NAVs exclude current-year income, while cum-income NAVs include current-year income. These figures do not include the cost of buying and selling shares in an investment trust. If these were included, performance figures would be reduced.

MANAGERS' COMMENTARY

Taiwan Semiconductor Manufacturing Company (TSMC) was the portfolio's top performer on the back of an excellent set of results where revenue rose 34% year on year and the company exhibited strong margin progression. The stock was also buoyed by Intel's announcement about potentially outsourcing its manufacturing. This would be a significant revenue opportunity for TSMC and would further enhance its market share position. Industrial gases firm Air Products also fared well in June on the back of stable results and an improved earnings margin, the highest posted by the company. Elsewhere, Dutch multinational Philips was another positive during the month as it continued to deliver results which were above expectations, driven by its personal health division with strong progress on margins also. The company in our view has the capacity to grow sales strongly this year despite a challenged environment.

Looking at the other side, Microsoft – our largest position – was the biggest absolute detractor in July. The company produced a solid set of results in the month, with strong revenue and profit growth across divisions and particular strength in gaming as well as in its intelligent cloud division. However, after a very strong run, having risen 30% year to date, the shares took a pause despite the strong results. Food producer Danone was another negative after it reported results which were broadly in line with lowered expectations, but which were

not well received by the market. In our view, the results were slightly underwhelming, but ultimately changed nothing in terms of our investment thesis. Other detractors were communication infrastructure provider Crown Castle and Paychex, a provider of human resources and payroll solutions.

In terms of portfolio activity, there were no new buys or outright sales over the month.

Mark Whitehead

[‡]For further information on Options please refer to Important Information overleaf.

^{*}The risk outlined at the end of this document relating to gearing is particularly relevant to this company but should be read in conjunction with all warnings and comments given.

[†]Source for historic yield: Martin Currie as at 31 July 2020. The historic yield reflects dividends declared over the past 12 months as a percentage of the mid-market share price, as at the date shown. Investors may be subject to tax on their dividends.

IMPORTANT INFORMATION

This information is issued and approved by Martin Currie Investment Management Limited. It does not constitute investment advice. Market and currency movements may cause the capital value of shares, and the income from them, to fall as well as rise and you may get back less than you invested. Please note that, as the shares in investment trusts are traded on a stockmarket, the share price will fluctuate in accordance with supply and demand and may not reflect the value of underlying net asset value of the shares.

Depending on market conditions and market sentiment, the spread between purchase and sale price can be wide. As with all stock exchange investments the value of investment trust share purchases will immediately fall by the difference between the buying and selling prices, the bid-offer spread. The value of investments and the income from them may go down as well as up and is not guaranteed. An investor may not get back the amount originally invested.

Investment trusts may borrow money in order to make further investments. This is known as 'gearing' and can enhance shareholder returns in rising markets but, conversely, can reduce them in falling markets.

The majority of charges will be deducted from the capital of the Company. This will constrain capital growth of the Company in order to maintain the income streams.

The company employs an active but tactical options strategy by using derivatives, predominantly writing (selling) puts and covered calls for investment purposes, this being principally to generate income. This may be at the expense of generating capital gains.

A sold put option obligates an investor to take delivery, or purchase of shares, of the underlying stock at a specified price within a specified time in return for receiving the payment of a premium.

Any use of derivatives for efficient portfolio management and options for investment purposes will be made on the basis of the same principals of risk spreading and diversification that apply to the company's direct investments.

Morningstar Rating for Funds

Morningstar rates funds from one to five stars based on how well they've performed (after adjusting for risk) in comparison to similar funds. Within each Morningstar Category, the top 10% of funds receive five stars, the next 22.5% four stars, the middle 35% three stars, the next 22.5% two stars, and the bottom 10% receive one star. Funds are rated for up to three time periods—three-, five-, and 10 years—and these ratings are combined to produce an overall rating. Funds with less than three years of history are not rated. Ratings are objective, based entirely on a mathematical evaluation of past performance. They're a useful tool for identifying funds worthy of further research, but shouldn't be considered buy or sell recommendations.
